Subject: Stator FYI

Hi Folks,

In looking for extra capacity in my charging system I looked into Electrex as a source for stators.

For folks with the Secas and Maxims, good news, their G32 stator will supply about 23A@14Vdc system voltage. This gives a bit more capacity than the stock 19A stator.

For those with high capacity stators (Maxim-X, Police models, etc) it is a reduction from 26A to 23A.

Just an FYI.

Good Morning Jeff
Thankyou for forwarding my name to Tim, I have contacted him off list.
Yes I can do stators for \$30-\$40 U.S. and I do rotors (alternator not brake)
and starter armatures also. If you have any need of the above in the future
please contact me.
